Introducing Vodafone Business SD Cloud Interconnect

Your highway to the cloud

vodafone business

C2 General

Multi-cloud is the future.
But dealing with more than one cloud provider can get tricky.

By 2029, organisations that establish a clear multi-cloud strategy upfront will significantly reduce dissatisfaction and unlock new business models and competitive advantages.

— Gartner, 2025 IT Infrastructure, Operations & Cloud Strategies Conference

In 2024, hybrid and multi-cloud complexity intensified the challenge of filling critical roles and retaining skilled staff, making cloud management one of the top operational concerns.

— IDC, 2024 Cloud Market Trends Report

84% of organisations say managing cloud spend is their top challenge.

— Flexera 2025 State of the Cloud Report

So, many businesses are looking

1

to make their hybrid and multi-cloud setup work seamlessly

2

for a smarter way to connect to multiple cloud providers

3

to meet customer demands across different geographies – without the complexity

If you're one of them – don't worry.
We've got you.

Meet **Vodafone Business SD Cloud Interconnect**

What is Vodafone Business SD Cloud Interconnect?

Vodafone Business SDCI (SD-Cloud Interconnect) with Equinix Fabric gives you **fast, secure, and flexible access to the world's leading cloud providers** – without the need to change your physical network infrastructure.

aws ORACLE Azure

This means:

Access from anywhere

Connect to the cloud securely, from wherever you are.

With data centres in over 35 countries, your teams can work smarter, no matter where your business takes them.

Flexible, fair pricing

Only pay for what you need.

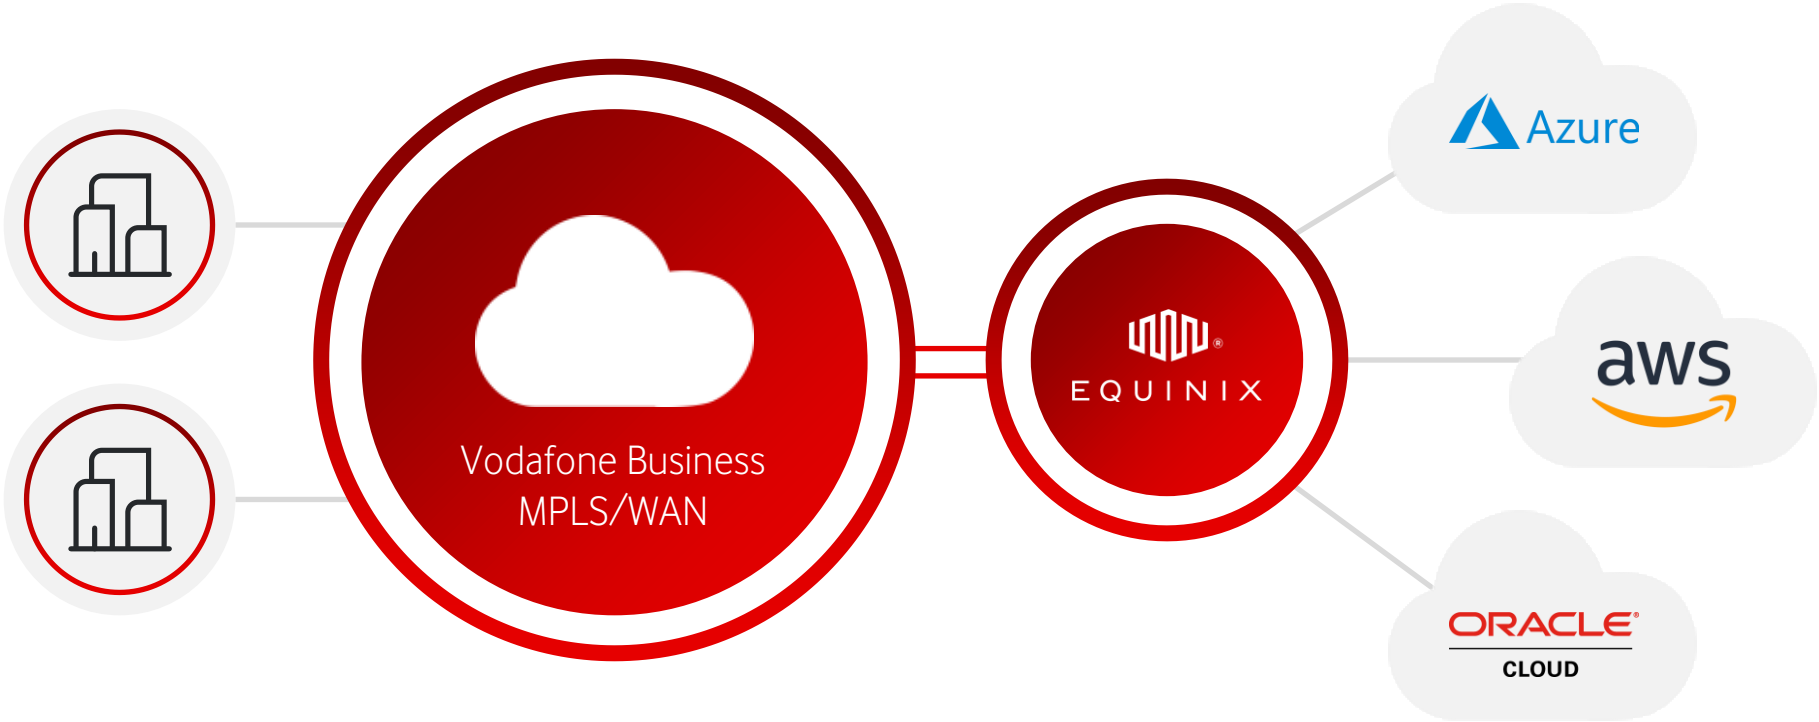
Scale your connectivity to match your usage – stay in control of costs and avoid paying for unused capacity.

Built-in security you can trust

Your data stays protected.

Using private connectivity from your network to the cloud, Vodafone Business security protocols and compliance standards keep your business safe

What is Vodafone Business SD Cloud Interconnect?



What is Vodafone Business SD Cloud Interconnect with Equinix Fabric?

Seamless cloud connectivity

Reach multiple cloud providers – no hardware changes needed.

We give you secure access without the hassle of reconfiguring your infrastructure.

Resilient by design

Keep your data safe in motion.

Secure, always-on connectivity protects it as it moves between your WAN and cloud providers.

Reliable network performance

Stay connected and protected.

A secure, private infrastructure keeps your business online – reducing the risk of downtime or data loss.

Scalable to fit your needs

Pick the bandwidth that works for you.

From 50Mbps to 10 Gbps, you can easily scale as your business grows, without overpaying or disrupting operations.

Use cases

Cloud connectivity made simple

The challenge

Too many clouds, not enough clarity

Running workloads across AWS, Azure, and Oracle is essential for many businesses, but managing separate connections for each provider in each location creates costly network inefficiencies. They need a smarter, secure way to simplify access that reduces the burden on their IT teams

They need a smarter and safer way to unify access without adding complexity.

The Vodafone Business fix

One port to AWS, Azure, Oracle – and more to come

You'll get private access to all major cloud providers through **a single, secure platform** that we manage for you. This gives you high-performance connections to CSPs, so your IT team can focus on what truly matters, without the hassle.

Use cases

Global expansion with a head start

The challenge

New markets, old roadblocks

Enterprises need to expand into new regions which means moving apps to new Cloud regions to meet new data sovereignty requirements or simply placing their cloud apps closer to users to optimise performance.

But this can cause infrastructure delays, high capital expenditure and regulatory hurdles. And building connectivity from scratch can slow the return on your investment as well as your ability to comply or to improve user experience

The Vodafone Business fix

Go global. No growing pains

Through its partnership with Equinix, Vodafone Business provides access in over 35 countries. You can deploy infrastructure into Cloud Service Providers or Equinix Data Centres that are already connected to our global MPLS network, allowing you quick access to markets without the need for local builds or upfront investment. It's a **scalable**, **compliant** way to **grow** globally - without the growing pains

Use cases

Hybrid cloud without the hassle

The challenge

Legacy networks, create obstacles

As businesses adopt hybrid and multi-cloud strategies, extending existing WAN infrastructure to hosted services can be complex and costly.

The Vodafone Business fix

Data Centre Connect

Our standardised IP-VPN access into Equinix data centres makes it easy to extend your WAN, using pre-built interconnects and the flexibility of Equinix Fabric. It's **agile and secure** – no physical changes needed.

Why choose Vodafone Business?

Recognised. Trusted. Leading the way.

We're the only provider recognised as a leader in all three categories: global WAN, zero trust edge **and** managed SD-WAN/SASE services – proof that we deliver where it matters most.

We've been named a Leader in the:

2025 Gartner® Magic Quadrant™ for Global WAN Services

Forrester Wave™: Zero Trust Edge Service Providers, Q2 2024

2023 IDC MarketScape for managed SD-WAN/ SASE services
